

BIKE 2023 MAIN

DAINESE

BIKE 2023

MAIN

MADE TO PEDAL

BORN TO RIDE FREE

Dainese has completely eliminated the concept of segmentation by discipline. MTB protectors, helmets and apparel are created not just for enduro, trail or all-mountain biking, but to guarantee maximum freedom of movement even during longer rides, in total safety.

This approach is based on greater lightness, breathability and comfort when pedaling. Garments, helmets and protectors are designed for long rides, ensuring maximum freedom of movement on the saddle, from the steepest slopes to the most technical, uneven descents.

The most effective protector is freedom.

010/101

**IMPERCEPTIBLE TO WEAR,
FOR LIMITLESS RIDING**

Just 570 grams.

No lighter helmet reaches this level of safety.

**ACTIVE SAFETY
TECHNOLOGY**

Integrated NFC TwiceMe® system to transmit personal and health information faster and substantially reduce rescue time

LINEA 01

**The highest standards of protection,
in the lightest full-face helmet ever.**

**THE GREATEST
PROTECTION
ON ANY ROUTE**

Polycarbonate and dual-density EPS shell, mapped to provide greater protection where you need it most

PROTECTION

Thanks to its polycarbonate and dual-density EPS shell and the auxetics nylon exoskeleton it exceed all international standards in the category: CPSC 1203, CE EN1078, ASTM F1952-DH, ASTM 2032-BMX, AS/NZ 2063

LIGHTNESS

Just 570 grams (size M). Simply the lightest full face mountain bike helmet ever. Imperceptible to wear, designed to provide the highest level of protection while leaving total freedom of movement.

BREATHABILITY

Built to breathe. 29 air vents on the helmet: 8 on the chin guard, 5 in the frontal area, 2 close to the ears, 4 longitudinal and 10 rear extractors. Total ventilation for endless activity on the bike.

**IMPERCEPTIBLE TO WEAR,
FOR LIMITLESS RIDING**

Just 370 grams.

Fatigue-free protection for
maximum concentration

LINEA 03

**Protection, lightness and versatility
to tackle long distances with
maximum confidence.**

THE GREATEST POSSIBLE PROTECTION ON ANY ROUTE

Polycarbonate and dual-density EPS
shell, mapped to provide greater
protection where you need it most

ACTIVE SAFETY TECHNOLOGY

Integrated RECCO system for
detection in case of emergency

PROTECTION

Thanks to its polycarbonate and dual-density EPS shell mapped to provide greater protection where you need it most, it exceeds all international standards in the category: CPSC 1203, CE EN1078, AS/NZ 2063

LIGHTNESS

Made to pedal. Just 370 grams (size M). Imperceptible to wear, designed to provide the highest level of protection while guaranteeing maximum concentration on the bike.

SAFETY WEARABLE TECHNOLOGIES

Integrated NFC Twice Me system helps to transmit personal and health information faster and substantially reduce rescue time, while integrated RECCO system enhances the possibilities of detection in case of emergency.

The image features a dense, textured background of brown wood chips or mulch. Overlaid on this is a white, irregular geometric frame that resembles a stylized shield or a set of construction guidelines. The word "SAFETY" is written in a clean, white, sans-serif font, centered within the frame. Several small white geometric shapes are scattered around the frame: a semi-circle at the top left, a triangle at the top center, a diamond at the top right, a horizontal line at the bottom left, a square at the bottom center, and a circle at the bottom right.

SCARABEO
HELMETS

SCARABEO LINEA 01

The helmet engineered
around your kids' head

LIGHT AND DESIGNED AROUND KIDS' HEAD

Just 620 grams.

The highest protection standards
in a real kids' helmet.

ADAPTABLE

Size escalation via interchangeable
jaw pads and neckroll.

PROTECTION AND CARE

Removable and washable antibacterial
thermoformed bamboo lining.

PROTECTION

No compromise in protection. The Scarabeo Helmets meets the highest international standards:
CE EN 1078:2002+A1:2012 (UE), CPSC 1203 (US), CPSIA | ASTM F2032-15 (BMX) | AS/NZS 2063 (AUS/NZL).

LIGHTNESS

Designed and engineered around kids' heads: it's not an adult downsizing, it's a helmet that meets the real needs of children aged 5 to 10. The result is a light and perfectly wearable cool helmet.

PERFECTLY FITTED

Starting from the size 50 - 54, the interchangeable jaw pads and neckroll allow adapting the helmet fit.

The background is a dense, close-up photograph of brown, dried autumn leaves. A white geometric shape, resembling a stylized house or a hexagon with a pointed top, is overlaid on the image. Inside this shape, the text "SCARABEO SAFETY" is written in a white, sans-serif font. The text is centered and occupies the middle portion of the image. There are several small white decorative elements: a circle on the left side of the geometric shape, a small square at the top center, a small square at the bottom center, and a small square at the bottom right corner of the shape.

SCARABEO SAFETY

SCARABEO

The Dainese Scarabeo line offers the youngest riders technology developed by the great MTB champions and used in world championships. All the safety of the professionals, to protect the athletes of tomorrow.

Scarabeo garments come complete with the innovative patented Dainese RIBBO System. By cutting the special ties that control fabric elasticity, the circumference of the gear can be gradually increased as the young rider grows, allowing to use it for several seasons.

Kid's play got serious.

MIPS®

RECCO®

NFC MEDICAL ID BY TWICEME®

PRO-SHAPE 2.0 Hybrid

Comfort meets superior safety. The combination of carbon-elastomer protector and metal. Auxetics inspired Dainese Pro-Shape 2.0 technology allows total freedom of movement, lightness and superior ventilation thanks to its structure open on 45% of its surface, absorbing up to 87% of impact forces. MotoGP™ derived metal plate on the kneecap protects from forward collisions, roots, rocks and protrusions, and helps the rider to slide in the event of a fall, reducing the risk of dangerous rolling.

PRO-SHAPE 2.0

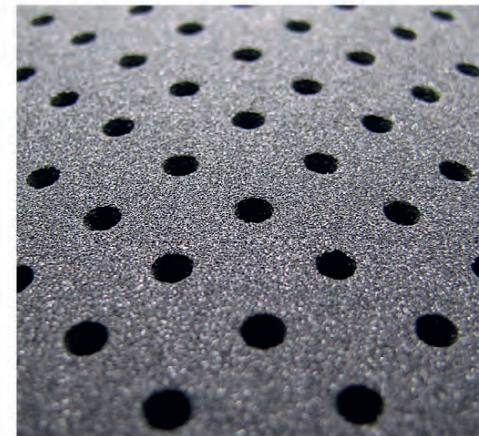

Pro-Shape 2.0 is the protector inspired by auxetics, forms found in nature with the quality of expanding in any direction when pulled or put under pressure. Made of carbon elastomer material, it can absorb 83% of impact force without any of it being transmitted to the body. Open across 55% of its surface, it allows for a continuous flow of air, for optimal perspiration management. Due to its pre-curved structure, it perfectly adapts to the rider's movements, guaranteeing superior stability and freedom of movement.

SCARABEO PRO-SHAPE

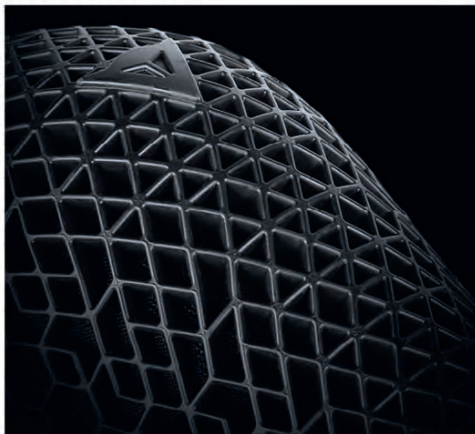

Technologies developed for champions, designed to fit young riders. Scarabeo Pro-Shape protectors are devised to accompany children through their growing performance, and employ the same materials used in protectors for adults. Inspired by auxetics, the carbon-elastomer protector absorbs 83% of impact force. Open across 55% of its surface, it ensures maximum ventilation in any condition. The pre-curved structure faithfully adapts to all body movements, guaranteeing stability and vast freedom of movement.

CRASH ABSORB®

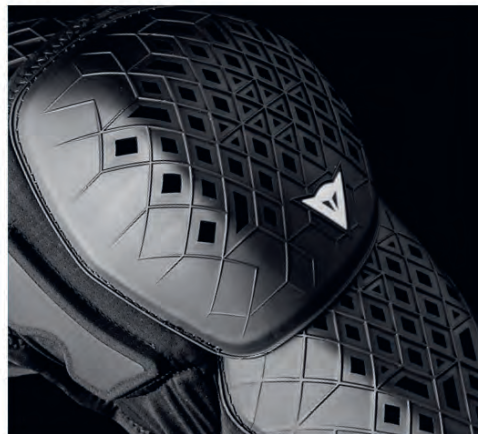

Special material (water-repellent elastic-visco nitrile rubber) with shape retention memory and excellent energy absorption that adapts perfectly to the shape of the body and ensures optimum fit.

PRO ARMOR

PRO ARMOR sets the benchmark for breathability, ergonomics and protection featuring a functional pattern inspired by the fractals principle. With the ultimate blend of mobility and protection, the low-profile design delivers unrestricted movement and all-day comfort while still meeting the EN 16211 European standards for impact protectors.

ARMOFORM

The Armoform substructure is defined by a supportive ribbing, with thicker pattern in high impact zones and tapered near the edges for mobility and flexibility. The hard polyethylene shell used in Armoform is precedent setting for its ability to dissipate shock over a wider area, to slide across a crash surface and to prevent 'piercing', leading to less injury from sharp objects like rocks and branches as well as world class protection at high speed.

SENSITIVE FABRICS

Eurojersey Sensitive* textile is a Made in Italy UV-protective clothing fabric, conceived to deliver the higher level of anti-pilling and tear and abrasion resistance, while being breathable, soft and comfortable. Its composition 75% nylon and 25% elastane allows to provide maximum durability and freedom of movement, making it perfect for highly-resistant MTB garments.

MIPS®

Rotational motion can be the result of an angled impact to the head. These impacts may result in an abrupt stop that can cause the brain to move or stretch. The brain is more sensitive to rotational motion than linear motion because it has shear properties similar to water or gel. When different parts of the brain move relative to each other as a result of rotational motion, the tissues can stretch, which can cause concussions or other brain injuries. The MIPS® safety system features a low-friction layer inside the helmet that allows a multi-directional movement of 10-15mm on certain angled impacts, intended to help reduce rotational force to the head.

RECCO®

The RECCO reflector makes you searchable to the rescuers. RECCO reflectors are lightweight passive transponders which require no power or activation to function. They consist of a diode and an antenna. How it works: the RECCO detector emits a directional radar signal, like the beam of a flashlight. When the radar signal hits the RECCO reflector, it is echoed back to the detector and points the rescuer in the direction of the victim. The closer the detector gets to the reflector the stronger the returned signal, ultimately allowing the rescuer to pinpoint the victim's location. RECCO reflectors are designed to last a lifetime and do not age or wear out. If not mechanically damaged they will last forever.

NFC MEDICAL ID BY TWICEME®

TwiCeme® stores the user's vital info and makes it accessible in seconds using a smartphone. The info is stored locally on your equipment. No cloud services involved.

MEASUREMENTS

As it is not currently possible to industrially produce tailored back protectors, back protector must be worn by people with anthropometric characteristics lying within a certain range. A back protector is suitable for a person if its height does not exceed the seventh cervical vertebra and if the minimum area of the model is related to a waste shoulder height greater than or equal to that of the person.

CHOOSE THE SIZE OF A PROTECTOR CORRECTLY

The choice of the correct size of a back protector, according to the standard, is determined by the Waist-Shoulder height. This is the difference in height between the midpoint of the shoulder and the waistline (immediately above the hipbone). According to the Dainese standard, this measurement must then be qualified by the correct dimension of waist strap, identified by a size (ex. XS, S, M...). It is not correct to define the measure of the back protector on the basis of the height of the person, because even if the back could have the same dimension, the legs could have a different length.
