From the very beginning Dainese has worked with skiers at the centre of a constellation of perfectly complemented research and development strategies. Collaboration with world-class technical laboratories optimize perfectly the vision of their skiers.

Dainese's passion and commitment to safety is thus as strong as its desire for the podium. The logo says it all. The Speed Demon moves last in a definite direction, seeing things that mortals can't imagine.

Just as the armadillo's shell and the lobster's exoskeleton are the result of aeons of adaptive evolutions, so Dainese protective products are the result of a constantly adapting, evolving energy that seek the perfect protective solution.

Dainese protective gear is made for all conditions and all situations, giving you the confidence to push boundaries, and step right to the edge of what's possible.

Style, aesthetic, form and function are conceived as an integral whole that chimes perfectly with the times ensuring product development and exactitude in manufacturing are equally important elements of the products' identity.

DAINESE MILESTONES

1971

The idea takes shape

The first drafts of the company logo were designed. The first logo featured a speed demon as a symbol of dynamism and rebellion.

1978

The first back protector in history

The collaboration with Barry Sheene led to the creation of the first back protector designed by Marc Sadler.

1985

The mobile clinic in the world

Collaboration began with Doctor Costa's Mobile Clinic.

1994

Back protectors for skiers too

Kristian Ghedina, Deborah Compagnoni and the Italian National Team use Dainese back protectors at the World Cup for the first time. This was the first time that the back protector was introduced to the world of Winter Sports.

1999

MTB competitions

Dainese became increasingly popular in the world of mountain biking and became the byword for protection. Dainese provided the champions Shaun Palmer, Anne-Caroline Chausson and Cedric Gracia with its protection systems. Nicolas Vouilloz became World Downhill Champion for the seventh time and entered the history books of mountain-biking with Dainese.

2000

On the heads of champion skiers

The first Dainese ski helmet appears at the World Championship Series, developed with the assistance of the multiple title winner Lasse Kjus.

2005

Safety Partner on the slopes

Dainese became the "Safety Partner" of the Italian National Ski Team and D-Mobile provided assistance to skiers in the Alpine Skiing World Championship races.

1972

The first product

Dainese was founded at Molvena (Vicenza). The first article Dainese produced was a pair of motocross trousers.

1983

Protection for everyone

Back protectors, which up to that time were used only on the track, became available to the general public.

1993

D-Tec*

The Dainese Technology Centre (D-Tec*) is created, an R&D technical centre for the study of protective technology and the development of products for the market.

1994

No impact

The No Impact division was formed to bring Dainese know-how to other sports: MTB, snowboard and alpine skiing.

2000

D-air* is created

The prototype of the D-air* airbag for motorcyclists was developed together with the Israeli firm Merhav APP and presented in Munich.

2001

Mobile research

D-Mobile is created. This mobile research structure was an extension of the R&D department and visited race tracks around the world to identify and test the latest technological innovations.

2006

Sparks of passion

Special helmets and suits were created by the Dainese R&D Department for the "Sparks of Passion" event in which ice skaters played a key role in the magnificent choreography staged for the opening and closing ceremonies of the 20th Winter Olympic Games in Turin.

2011

The Beta International award

Following their success in the worlds of motorbikes, mountain bikes and skiing, Dainese decided to accept a new challenge and to bring the concept of safety to horse riding. The Dainese Equestrian Line was awarded a prize in the Safety & Security category by Beta International, the international event leader for the equestrian trade.

2012

The first prototype of the D-air* Ski was presented

2014

The D-air* was presented officially and used during trainings

2015

D-air* made its debut in WC races

D-air became the unmatched leader for airbag protection in the FIS Alpine Ski World Cup.

2016

New Zealand

The Dainese Group got onboard Emirates Team New Zealand for the 2017 America's Cup with the new Sea-Guard, essential gear for crew's protection while sailing.

2017

Dainese celebrates its 45th anniversary

2018

The prestigious Red Dot "Best of the Best Award" goes to the Dainese AWA (All Weather Activity) M1 jacket, acclaimed for its outdoor versatility and outstanding cross-functional performance.

2018

Enduro Canyon Factory Racing Team wins the Enduro World Series 2018

2007

D-air* Racing

During the Valencia Grand Prix, the Dainese R&D department introduced D-air* Racing in full active form. During the practice sessions, a fall by Simone Grotzky saw the first airbag deployment.

2011

Ski safely

Dainese signed a three-year collaboration agreement with Fischer to introduce equipment aimed at significantly increasing safety on the ski slopes.

2013

Protection for astronauts

The collaboration between Massachusetts Institute of Technology (MIT) and Dainese continued to make astronaut's lives safer. Dainese had already passed the NASA supplier selection procedure for making special protective items which astronauts would wear inside their space suits.

2015

Dainese at the Venice Biennale

Dainese exhibits its innovative technologies at the 56th Venice Biennale. The company presents the D-air*, the motorcyclists' airbag, and Biosuit*, its pressurized suit for astronauts.

2015

ESA

The Danish ESA astronaut Andreas Mogensen tested the SkinSuit and brought Dainese for the first time in the space.

2016

Danny Hart - Downhill MTB World Champion

Dainese returned at the top of the Downhill MTB scenes thanks to Danny Hart who won the title in Val di Sole.

2018

Dainese ski racers Matthias Mayer (Super-G) and Sofia Goggia (Downhill) both strike Gold in the Olympics, pushing the performance envelope with the advanced protection of Dainese's D-air* Ski airbag technology.

2019

D-air* Ski Evolution available for consumers

BIOSUIT

WHAT IS THE BIOSUIT?

Starting from Arthur Iberall's studies in the Forties, it has been discovered that there are certain points of the body that, despite movements, do not contract and do not stretch. By connecting these points through the so-called "lines of non-extension", pressure remains constant. BioSuit is designed to connect these points, being able to apply the necessary mechanic pressure to the body, although without compromising movement. The news is exactly the replacement of pneumatic pressurization with mechanic one. The inside of astronaut's suits, in fact, in order for humans to survive in the vacuum of space, need to provide pressure. The skintight suit allows for a degree of movement impossible in a gas-filled suit.

WHEN DID THE BIOSUIT GO TO SPACE?

BioSuit has not gone to space yet. BioSuit was born from one of NASA's needs who, for the first human journey to the Red Planet expected around 2030, has set up a project to design a new space suit, lighter and more practical.

HOW WAS THE BIOSUIT MADE?

The lines of non-extension are represented by the red and black filaments that decorate the BioSuit prototype. The suit will be made of elastic material, but for all other features options remain open. For sure, BioSuit must guarantee to astronauts oxygen inflow, protect them from effects of prolonged microgravity, solar radiation and impacts with micro-meteoroids, although offering greater flexibility and finding the perfect balance with ergonomics and comfort.

HOW DID THIS PROJECT COME ABOUT?

Conceived by Dava Newman, MIT Professor and NASA'S Deputy Administrator, BioSuir has been designed by Trotti and Associates, owned by Argentinian space architect Guillermo Trotti, whereas the first prototypes are the outcome of the Dainese Science and Research Center's know-how.

SEA-GUARD

The Dainese Group is the "Official Safety Partner" of the 2017 America's Cup Winner **Emirates Team New Zealand**. The crew, who for the first time chose pedals instead of traditional "coffee grinders" to operate the winches, wore the new SEA-GUARD jacket designed and developed by Dainese, which integrates protection and aerodynamic performance with its floating functions.

At over 50 knots, the conditions facing the crew are extreme, similar to those to which MotoGP riders are exposed. On-board safety is therefore the key element behind the partnership between Dainese and Emirates Team New Zealand. This has led to the creation of SEA-GUARD, the first item of protective clothing specially designed for competitive sailing. Thanks to a wise balance between Crash Absorb material and low-density PE, SEA-GUARD, in addition to its floating function, provides impact protection and also allows complete freedom of movement for next-generation grinders, who use their leg power to push pedals instead of arm-powered winch grinding.

SEA-GUARD is the only ergonomic and comfortable solution designed to optimise crew performance. SEA-GUARD incorporates an aerodynamic motorcycle hump, together with the Oxygen tank housing - something that the sailors must use in emergencies such as when the boat capsizes - and for on-board communication devices.

HP HARD PACK

The building block of every ski resort, the reliable canvas that breeds progression and is home to the fastest racers and is hardpack. Every lift-served experience revolves around and is tied together by hardpack snow and this is the essence of Dainese's HP collection. HP is Dainese's inbound, resort-specific part of the 2020 winter collection.

HP is race-inspired resort outerwear for skiers who demand top performance from themselves and their gear.

Skiers who live for speed, testing the limits of their edge grip and control, carving the steepest pitches.

DAINESE

HP DIAMOND S+

PART NUMBER **SIZES**

204749512 XS - XXL

The HP Diamond S+ ski jacket is the ultimate expression of Dainese's research. It allows its wearer to descend safely, even in the most extreme conditions. The excellent breathability and waterproofing of the Dermizax™ EV membrane, elastic in four directions, combines with the total protection and comfort of the soft Flexagon back protector, perfectly integrated into the jacket. Adjustable at the waist and removable, it allows the wearer to select the best configuration. PrimaLoft® Silver lining ensures excellent heat insulation. The pre-curved sleeve design and athletic fit perfectly mirror a skier's movements. Innovative technology, advanced materials and exclusive quality, to give you the freedom to take on even the toughest of descents.

HP ICEDUST

PART NUMBER **SIZES**

204749513 XS - XXL

Strive for maximum performance, whatever the conditions. Designed to meet the needs of the most demanding skiers, the structure of the HP Icedust jacket is designed for passionate individuals who seek the very best in terms of lightness, breathability and fit. The Dermizax™ EV membrane, waterproof and elastic in four directions, allows for skiing in all conditions, even in the midst of a storm. PrimaLoft® Silver lining keeps the body cool and dry even after several hours of intense activity. The iconic design with double front zippers allows for different combinations of use. The pre-curved sleeve design and athletic fit perfectly mirror a skier's movements. Its profile is designed to perfectly accommodate a stand-alone Dainese back protector.

HP DENDRITE S

PART NUMBER **SIZES**

204749504 XS - XXL

A highly efficient jacket designed for skiers who want to enhance their performance. The Ergo-Move structure offers both resistance and elasticity, thanks to a construction combining two fabrics, positioned to guarantee excellent freedom of movement and abrasion protection depending on the area of the body. The result of research into the ergonomics of the human body and studies of alpine ski techniques, the garment is designed to ensure safety in all circumstances. The back pocket can house the Auxagon back protector, which is adjustable at the waist, allowing the skier to take on the toughest of slopes with maximum protection. The high-resistance fabric safeguards the shoulders, elbows, and other areas most often subjected to friction. It has an athletic fit and air vents under the sleeves.

HP1 BL M SHIRT

PART NUMBER	SIZES
204910019	XS/S - XL/XXL

The HP1 BL is the Dainese First Layer specifically designed for those who wants to push past their limits and conceived to satisfy the needs of most demanding skiers. Years of research into the dynamics of the human body have helped determine which parts of the body are never extended or contracted, despite movement. By joining these points along "non-extension lines", the pressure placed on the body is kept constant. This research helped Dainese engineer the BIOSUIT, designed for NASA astronauts, and was the inspiration behind the structure of the HP1 BL M SHIRT/HP1 BL L SHIRT. Seamless technology and the Dryarn fabric are combined together to provide great insulation with maximum breathability, coolness and comfort. Meanwhile, the "non-extension lines" guarantee a compression effect that helps keep muscles in position when skiing.

Dryarn

FEATURES

Bacteriostatic, hypoallergenic and anti-odor

Differentiated weaving with compression areas and interwoven micromesh sections for improved airflow

Mapped body "lines of non-extension"

Micromesh sections for improved airflow

HP SNOWBURST PANTS WMN

PART NUMBER	SIZES
204769397	XS - XXL

Developed to enhance the performance of the most demanding skiers, the HP SNOWBURST pants are the result of research into the ergonomics of the human body and studies of alpine ski techniques. The exclusive Ergo-Move technology offers both resistance and elasticity, thanks to a construction that combines two fabrics, positioned to guarantee excellent freedom of movement and abrasion protection depending on the zone. The large side pockets, extended inner air vents and an athletic fit contribute to making this a versatile garment in all conditions.

HP ROLLER WMN

PART NUMBER **SIZES**

204749515 XS - XXL

The HP Roller jacket is designed for skiers who seek maximum comfort and heat insulation, as well as the waterproofing guaranteed by the Dermizax™ stretch membrane. A clean design and a good fit, to take on downhill slopes whatever the weather. With its standard fit and regular length, the jacket is particularly warm thanks to the significant weight of its lining, and can be used on even the coldest days out on the slopes.

Its profile is designed to perfectly accommodate a stand-alone Dainese back protector.

HP1 BL L SHIRT

PART NUMBER	SIZES
204910021	XS/S - L

The HP1 BL is the Dainese First Layer specifically designed for those who wants to push past their limits and conceived to satisfy the needs of most demanding skiers. Years of research into the dynamics of the human body have helped determine which parts of the body are never extended or contracted, despite movement. By joining these points along "non-extension lines", the pressure placed on the body is kept constant. This research helped Dainese engineer the BIOSUIT, designed for NASA astronauts, and was the inspiration behind the structure of the HP1 BL M SHIRT/HP1 BL L SHIRT. Seamless technology and the Dryarn fabric are combined together to provide great insulation with maximum breathability, coolness and comfort. Meanwhile, the "non-extension lines" guarantee a compression effect that helps keep muscles in position when skiing.

FEATURES

Bacteriostatic, hypoallergenic and anti-odor

Differentiated weaving with compression areas and interwoven micromesh sections for improved airflow

Mapped body "lines of non-extension"

Micromesh sections for improved airflow

Seamless build for superior comfort

MATERIALS

10% Dryarn®
85% Polyamide

SKI DOWNJACKET SPORT

PART NUMBER	SIZES
204749481	XS - XXL

The evolution of the well known ski downjacket, the SKI DOWNJACKET SPORT was redesigned in a more sporty way, conceived now also to breathe better thanks to the two big air ventings on the front. The Jacket is still specially cut and constructed to isolate down in the body's core areas to ensure warmth. It still feature a fully waterproof, seam sealed Dermizax™ EV exterior and the full features expected of a ski jacket, including a thumb loop, powder skirt, pass pocket and a removable hood. The jacket is padded with 100% PrimaLoft® Cross Core™ an innovative material conceived for NASA and made with Aerogel. This element is composed of more than 95% air and it is the lightest solid material known to man. Extremely light and super insulated for every winter challenge.

204D30003 - WMN	XS - XL
204D30100 - spare part man	3 - 4
204D30101 - spare part wmn	1 - 2

Conceived after over a decade of severe studies concerning most rough impacts into motorcycles races, in 2012 for the first time an Airbag prototype technology was introduced into the Ski World. Since that time, several modifications were made in order to make the best protective product ever known into Ski races, and since its debut in WC races in 2015, the D/Air became the unmatched leader for airbag protection in the FIS Alpine Ski World Cup. The system is very complex, made with a hybrid construction that mixes together the Wave Back Protector certified technology with an inflatable bag that covers ergonomically the chest, the deltoids and the shoulders. The system is made with a GPS and a gyroscope that, when a loss of trim is detected, send the signal to the pyrotechnic charge that with a detonation inflates the bag and protect the skier in few milliseconds. The same technology used by Lindsey Vonn, Sofia Goggia and Matthias Mayer is now available for every athlete demanding for unrestricted protection. The dream comes true.

- 88 D-BRID
- 89 D-SHAPE

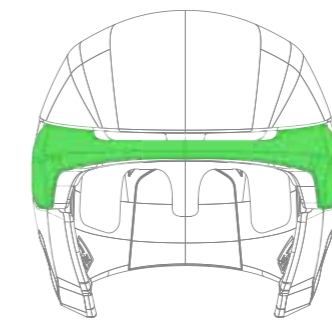

NUCLEO MIPS PRO

THE PROTECTION THAT SURROUNDS THE SKIER. A LIGHT AND COMPACT HELMET, DESIGNED FOR THE SAFETY OF YOUR BEST PERFORMANCES.

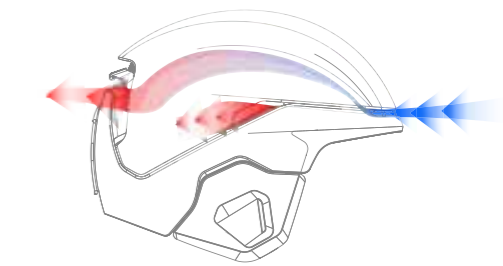

REVERSE SAFE

Safety and performance drive the design. Superior protection and lightness where the skier needs them the most.

ARMORING

This ABS ring provides an evolved protection on the most vulnerable areas of the head.

AIR INTAKES

The perfect combination of ventilation and aerodynamic performance. Air channelled through the top of the helmet carries excess heat and stabilizes the head at higher speed.

DAINESE

NUCLEO MIPS PRO

PART NUMBER	SIZES	
204840370	XS - S (51/54) M - L (55/58) XL - XXL (59/62)	Maximum safety for superior performance. The NUCLEO helmet is lightweight, compact and aerodynamic, specially designed to offer a flawless fit on the head. REVERSE SAFE technology combines a lightweight outer shell with the multi-impact protection of the ABS ARMORING, enveloping the head and sheltering the areas that are more delicate and statistically more susceptible to impact in the event of a fall. The MIPS system ensures even greater protection against rotational forces, preventing the head from serious injuries caused by twisting in the event of impact. The BOA system guarantees exceptional comfort, allowing the skier to adjust the fit with exceptional precision. Air vents also channel the flow of air through the shell and interior, transporting excess heat and humidity out of the helmet through the integrated spoiler, resulting in the perfect combination of ventilation and aerodynamic performance. A distinctive design, specially created to give you the confidence you need to give your best on the slopes, whatever the weather. The PRO version is distinguished by a premium micro-metric closure and an exclusive racing graphic.

ZEISS

FOR A BETTER READING OF THE SLOPES

More safety and visual comfort: our ZEISS lens technology improves your vision in snow-covered terrain in all light conditions. Uncoated, it is suitable for low light conditions, while a mirror coating is recommended for strong light. Colours and contrasts are enhanced – even when you’re racing down the mountain. The special spectral curve of the tint acts as a blue attenuator, but still allows a portion of the blue light through, in order to receive all important information from light and from your environment. ZEISS technology allows you to better read the slopes because uneven areas in the snow (bumps and dips) are easier to recognise.

ZEISS lens improves vision in all light conditions in the snow and enhances colours, brightness and contrast, even at high speed on the slopes. In other words, it makes skiing safer. Unlike standard blue filters, the special spectral curve

of ZEISS lens suppresses blue light but allows some to reach the eye – in the range between 380 and 500 nm. This allows you to recognize unevenness in the snow such as bumps and depressions. This makes skiing and snowboarding safer.

Furthermore, the snow goggles models for men are available with polarizing filters. ZEISS POL snow goggles feature thermally shaped lenses with a red tint.

- They ensure:
- Less glare caused by snow and ice
- Optimum vision and wearing comfort
- Better contrast and detailed vision
- Protection against sunlight

SCARABEO FLEXAGON WAISTCOAT

PART NUMBER	SIZES
204876005	JS - JXL

Flexagon redefines the standard of protective comfort with its innovative construction technology. The new version was restyled with a brand new fabric, capable to provide the skier with an unnoticed comfort to the touch and breathe better than the previous fabric. The exceptional flexibility is aided by overlapping layers of Crash Absorb® memory foam that move independently of one another, and follow the anatomy of the body. Its ergonomic pattern of hexagon shaped soft pads provide comfort and maximum freedom of movement (6 sides, mobility on the 30°, 90° and 150° axes) along with effective protection.

FEATURES

D-CABIN WHEELED BAG

PART NUMBER	SIZES
201980071	N

The D-Cabin is carefully designed to comply with airline cabin regulations, with overhead-compartment-friendly dimensions and a light construction to help meet weight restrictions. The polyethylene main tub is sturdy enough to withstand abuse, and there's a single-stage telescoping handle.

GENERAL FEATURES

- Capacity 38 L / 49 L
- Dimensions: 54 cm x 35 cm x 20 cm
- Easy clean eco-friendly PVC divider
- Expandable: allows you to increase the packing space
- Front accessory pockets
- Large main volume with adjustable divider gives multiple packing options
- Lightweight for greater carrying capacity on weight rescttricted airlines
- Molded PE Tub whitstands abuse and keeps gear safe from the elements
- Single stage telescopic trolley handle
- We recomend checking with your airlines for the latest cabine luggage allowance
- Weight: 2,8 kg

DERMIZAX™ EV

Dermizax™ EV is a waterproof, windproof, and wicking membrane that utilizes moving molecules, as opposed to most other membranes which have micropores. This offers a number of advantages and makes Dermizax™ shell clothing the very best on the market thanks to its high performance and superior durability. The Dermizax™ membrane is extremely flexible. It has an elasticity of more than 200%. In practice, this means that the membrane can be stretched up to twice its own length in four directions. This ensures that Dermizax™ garments are very comfortable to move in, while reducing the risk of delamination during extreme activities.

DERMIZAX™ DX

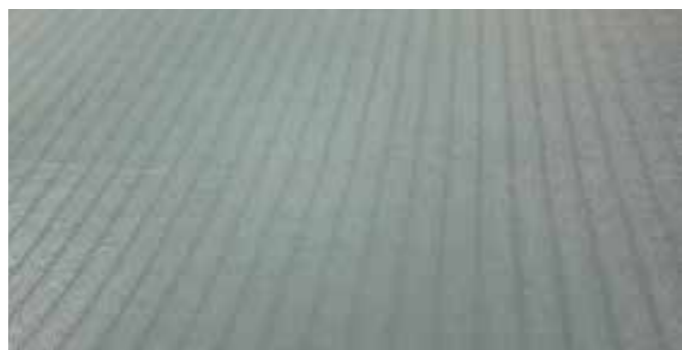

Dermizax® DX is a 2 way stretchable membrane that, thanks to its ultrathin non porous membrane is capable of providing the user with superb waterproofness and tough performance that withstands all-round outdoor conditions

ERGOMOVE

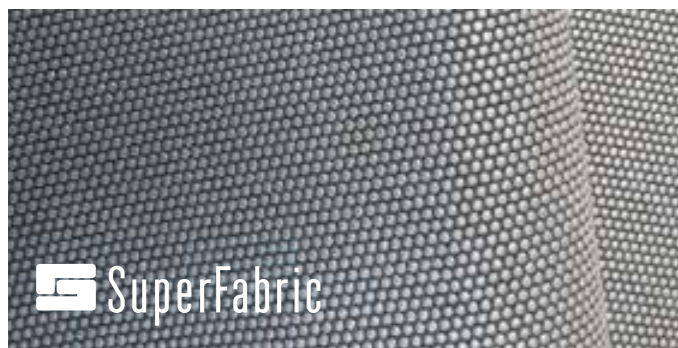

Dainese Ergo-Move construction is the result of extensive studies into human ergonomics, providing skiers with maximum comfort and freedom of movement. Each garment is designed using stretch fabrics on the areas that require the greatest flexibility, constructed using innovative shapes, such as pre-curved sleeves, that follow the movements of your body during physical activities. Selected models also boast Ripstop fabric in areas most susceptible to abrasion and impact, for additional resistance and durability, so the skier is ready to face whatever challenge the slopes throw. Ultimate comfort for maximum performance.

RIPSTOP FABRIC

Ripstop is a woven fabric using a special reinforcing technique that makes them resistant to tearing and ripping. It is woven with coarse, strong warp and filling yarns at intervals so that tears will not spread. Ripstop also holds a good DWR (Durable Water Repellent) coating.

SUPERFABRIC®

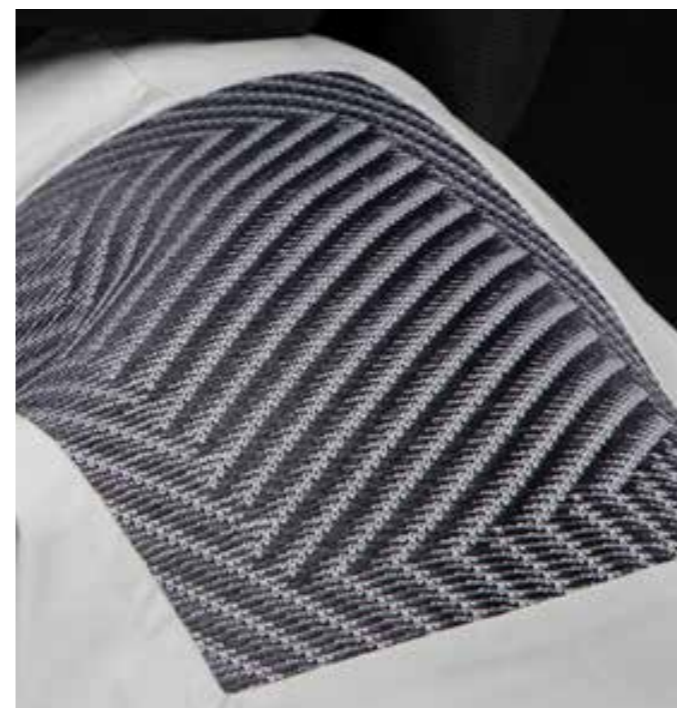

SuperFabric® is among the most durable, toughest fabric in the world, an innovative ceramic-coated low friction material that can provide very high levels of abrasion and slash resistance. SuperFabric® technology takes a fabric and overlays it with tiny plates ("guard plates") in a specific arrangement. The gaps between guard plates allow complete flexibility. It won't snag like knitted fabrics, which is especially important in helping protect against the additional injuries caused by material catching or pulling. It allows air to pass in and around the tiny guard plates creating a remarkable air-breathing product.

PERTEX® QUANTUM

Pertex® Quantum uses a tightly woven structure to provide a light and soft fabric that allows insulation to fully loft. Precisely constructed from incredibly fine yarns, Pertex® Quantum fabrics are designed to trap still air and improve the efficiency of insulation. A durable water repellent (DWR) finish sheds light rain and snow to provide additional weather protection. Garments made with Pertex Quantum gain great lightweight and packability, soft touch feel and windproofness to retain warmth.

WOVEN

Innovative materials and finishes for ultimate protection plus maximum freedom of movement. Dainese Woven technology uses special electronic knitting machines to integrate glass and polyester fibers into the fabric. These are positioned on the most exposed areas of the garment to offer incomparable resistance against sharp objects and friction. All this is whilst maintaining an exceptionally soft texture and excellent elasticity. Positioned on the outer surface of the fabric, the glass fibers offer superb abrasion resistance. The polymer fibers, integrated into the inner surface of the fabric, ensure optimal elasticity so that the garment can follow the shape of the body with exceptional precision, meaning maximum comfort and a flawless fit.

GOOSE DOWN

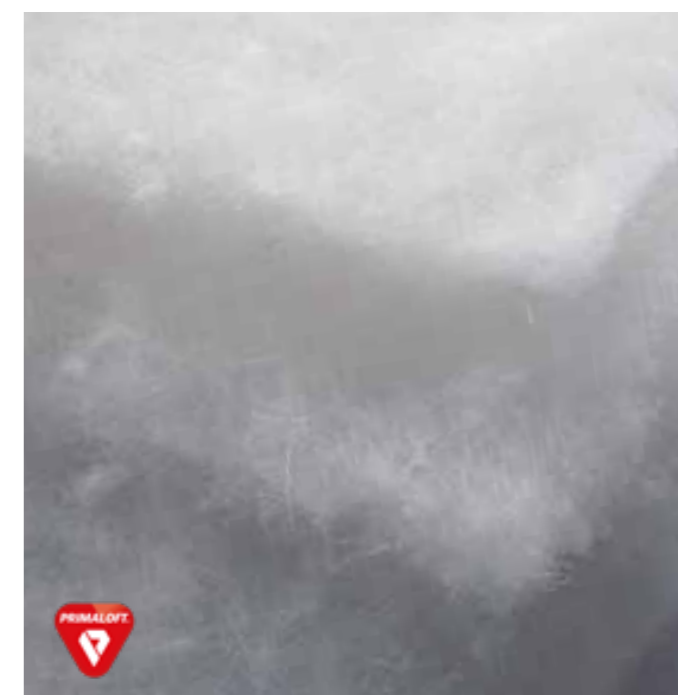

Goose down is the layer of underplumage that geese have beneath their feathers to keep them warm and dry. A down cluster is soft and fluffy and has filaments growing in all directions. Unlike feathers, down does not have quills. Goose down is traditionally used to fill pillows, duvets and other types of bedding. Goose down clusters are superior as they have larger and so possess more fill power and therefore have better insulating properties than down from any other bird. Goose down is luxuriously soft, resilient and has excellent insulating properties. It varies in colour from white to dark gray. It is also extremely breathable. Water vapour can pass through the down whilst the air pockets retain their warmth. These properties make goose down an excellent choice of filling for duvets and other bedding.

PRIMALOFT® CROSS-CORE™ INSULATION

PrimaLoft has established itself as the world leader in providing comfort solutions with high-performance insulation, fabrics and yarns through an unwavering commitment to pushing the boundaries of material science. We are constantly striving to create innovative new technologies that unlock your potential to connect with the outdoors. The PrimaLoft® Cross Core™ series represents a significant advancement in our technological capabilities. The PrimaLoft® Cross Core™ series fuses multiple PrimaLoft® technologies to create next-level comfort and performance.

PRIMALOFT® SILVER INSULATION BOOST

A hybrid of PrimaLoft® Silver Insulation Down Blend and PrimaLoft® Silver Insulation, PrimaLoft® Silver Insulation Boost is a fusion of 80% PrimaLoft® ultra-fine fibers and 20% water-repellent down engineered to deliver incredible lightweight warmth and wet weather performance in a luxuriously soft and remarkably slim silhouette. Unmatched warmth-to-thickness thermals mean more warmth in a smaller package for greater agility and freedom of movement while a PrimaLoft® proprietary treatment ensures protective performance in variable conditions. For streamlined performance this solution blends the wet-weather protection of PrimaLoft® synthetic insulation with the enhancement of down.

D-THERMO INSULATION

Dainese's synthetic microfiber thermal insulation material. It offers good standard in terms of warmth to weight ratio and a relatively good compressibility.

POLARTEC® ALPHA®

Polartec® Alpha® is a new active insulation fabric technology that regulates core body temperatures during dynamic and static activities. This advanced thermal material offers more design versatility than traditional puffy styles by providing enhanced fiber stability in a compressible high loft construction. Alpha® can be paired with more open-construction woven fabrics to create complete air permeable packages that are truly customizable on both the face and back of the fabric.

POLARTEC® THERMAL PRO®

Polartec® Thermal Pro® fabrics are the most visually dynamic and technically advanced of the Polartec® insulation fabrics. Available in a variety of unique surface textures and patterns, many of which enhance performance, Polartec® Thermal Pro® fabrics are great styling options for virtually every end use. New high loft versions have achieved the highest warmth to weight ratios of any fabric Polartec® has ever offered. Other versions have the look of traditional wool with all the performance benefits of fleece. Polartec® Thermal Pro® is our most diverse family of fabrics.

POLARTEC® POWER DRY®

Polartec® Power Dry® fabrics are designed to keep your skin dry when you sweat. All fabrics in this series feature a patented bi-component knit construction that uses different yarns on either side of the fabric. This creates two different surfaces: one that is optimized to move moisture away from the skin, the other to dry quickly.

POLARTEC® HIGH LOFT™

Polartec® High Loft™ was created to expand and enhance the performance benefits and design applications of fleece technologies. By utilizing a high loft fiber construction we developed a stunningly soft and fluffy structure that compresses to pack easily in small spaces. Large air pockets created by the extended fibers retain optimal warmth to provide the highest warmth to weight ratio of any thermal fleece fabric available today. The lofted fibers create large air pockets for retaining optimal body warmth and releasing excess heat for enhanced breathability during activities. This fluffy structure also reduces surface friction for comfortable layering with other materials.

POLARTEC® POWER WOOL™

Polartec® Power Wool™ is a design breakthrough for combining the distinct advantages of natural and synthetic fibers in a bi-component fabric. The industry standard of blending different yarns into a mixed composition reduces the intended benefits and hampers overall fabric performance. By isolating a merino wool interior and a synthetic fiber exterior we developed a hybrid fabric with distinct surface features to optimize wicking, breathability, odor resistance and durability. Wool fibers offer increased base comfort by retaining insulation and breathability even when wet. Their absorbent nature pulls moisture vapor away from your skin, transferring it to the outer synthetic layer where it expands and evaporates more quickly. This mechanical wicking action allows Polartec® Power Wool™ to keep moisture in motion at all times.

POLARTEC® POWER SHIELD®

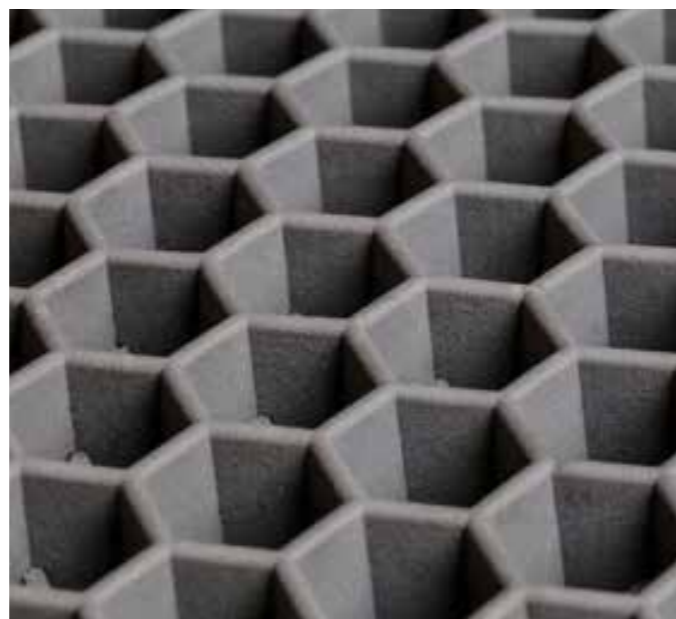

Polartec® Power Shield® was developed to bring greater strength and versatility to the soft shell fabric category. By designing a dense knit multi-component fabric we created a stronger balance between warmth, weather resistance and breathability. This adaptable protection set a new industry standard for performance fabrics that could remain comfortable and excel in calm to inclement weather conditions. By integrating an advanced micro-porous membrane between a durable weather repelling exterior we created a resilient outerwear fabric with increased breathability. The ability to block wind and water was finally directly integrated with a surface technology that could consistently increase breathability during any activity.

FLEXAGON BACK PROTECTOR

Flexagon redefines the standards of protective comfort with its innovative construction technology. The exceptional flexibility is aided by overlapping layers of Crash Absorb® memory retention foam that move independently of one another, and follow the anatomy of the body. Its ergonomic pattern of hexagon shaped soft pads provide comfort and maximum freedom of movement (6 sides, mobility on the 30° 90° and 150° axes) along with effective protection.

PRO ARMOR

PRO ARMOR sets the benchmark for breathability, ergonomics and protection featuring a functional pattern inspired by the fractals principle, the nature's language used to create complex structures that now becomes the new Dainese's protective design code. With the ultimate blend of mobility and protection, the low-profile design delivers unrestricted movement and all-day comfort while still meeting the EN 1621.1 European standards for impact protectors.

BAP BACK PROTECTOR

With a shape and armour system inspired by crustaceans and the armadillo, the BAP featured a composite structure, comprising an anatomically-shaped soft base and a series of articulated plates, each sized to provide the best distribution of impact forces and incorporating a low-memory, shock-absorbing polyurethane foam insert.

POLYPROPYLENE HARD-SHELL

Synthetic polymer used to produce the hard shell plates in protectors. Distinguished by elevated resistance to abrasion and impact. With their special construction, composite plates on the shoulders, elbows and knees comply to EN 1621.1/97 Standard. The rigid external shell absorbs and distributes impact energy over the protector's entire surface thanks to a patented reticulate structure that also offers lower thickness and weight.

SOFT FLEX HYBRID

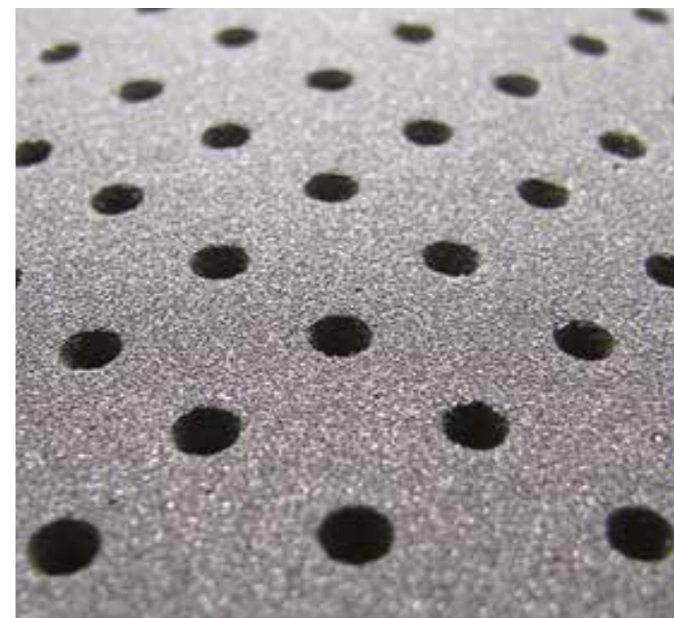

Soft Flex Hybrid combines the hard-shell technology with the comfort of a soft protector. The superb flexibility of Crash Absorb® memory retention foam, which adapts to the shape and movement of the body is coupled with rigid spinal plates in thermoformed shock absorbent Polystyrene for increased protection in the most critical areas.

AUXAGON BACK PROTECTOR

Inspired by the geometry of auxetic structures, which expand in all directions when placed under tension, Auxagon protective technology ensures extreme flexibility and adaptability, following the movements of the human body with extreme precision. Ultimate ergonomics for a superior fit on the back. Auxagon protectors are composed of three independent layers, which glide over each other, offering exceptional mobility for maximum freedom of movement during physical activity. Lightweight and comfortable with maximum protection in all conditions.

CRASH ABSORB

Special material (water-repellent elastic-visco nitrile rubber) with shape retention memory and excellent energy absorption that adapts perfectly to the shape of the body and ensures optimum fit.

ERGOTEK KNUCKLE INSERTS

Dainese Ergotek technology is the ultimate expression of ergonomics and protection. Developed by combining polyurethane and carbon fiber inserts, it allows the fingers to be moved separately, guaranteeing a superior safety of the knuckles. This innovative technology applied to gloves is the result of studies carried out in World Cup Alpine Ski races. Thanks to their unique design, the hand stays light and has a total freedom of movement. It is the new benchmark in terms of protection and comfort.

MEASUREMENTS

CHOOSE THE SIZE OF A PROTECTOR CORRECTLY

As it is not currently possible to industrially produce tailored back protectors, back protector must be worn by people with anthropometric characteristics lying within a certain range. A back protector is suitable for a person if its height does not exceed the seventh cervical vertebra and if the minimum area of the model is related to a waste shoulder height greater than or equal to that of the person.

The choice of the correct size of a back protector, according to the standard, is determined by the Waist-Shoulder height. This is the difference in height between the midpoint of the shoulder and the waistline (immediately above the hipbone). According to the Dainese standard, this measurement must then be qualified by the correct dimension of waist strap, identified by a size (ex: XS, S, M...). It is not correct to define the measure of the backprotector on the basis of the height of the person, because even if the back could have the same dimension, the legs could have a different length.
