

PELTONEN

PELTONEN COLLECTION  2025/2026

NEW

SPEED EDGE 2.0

As a ski manufacturer, Peltonen was founded in 1945 by Toivo Peltonen, a talented craftsman and an entrepreneur to the bone. The skis were originally handcrafted with manual tools from a single piece of wood. Through product development Peltonen skis have made their way to Olympic-winning level. Our roots are stemming from a small town Hartola, where the factory was located until 2011 when we finally and literally grew out of space. In 2011 we moved the factory into a new state-of-the-art production facility in Heinola.

Today, we are investing heavily in our production and in product development. As we approach our 80th anniversary our

product development is more active than ever. Our extremely committed personnel make sure that every day we put love, passion and care in to our products.

As a result of this dedication, you can enjoy the great features of Supra X World Cup skating ski.

With no stones left unturned and after years of research and development, we are introducing our Speed Edge 2.0 technology. Another novelty is our OSC Curve concept. Furthermore, together with a handful of other technical improvements, Peltonen ski collection has undergone a complete visual facelift. See you on tracks!

FROM RACING TRACKS TO OUT AND ABOUT: FIND YOUR PERFECT SKI WITH PELTONEN

Whether you count seconds on tracks or want to explore difficult terrains, Peltonen has the perfect ski for your needs. Our WCR and Racing Collections are for race skiers and skiing enthusiasts looking for the best technologies and performance. Performance and Outdoor Categories combine quality and functionality for the needs of an active or recreational skier. When terrain gets more difficult or you want to get off the tracks, our Backcountry Collection will help you enjoy the unexplored paths.

NEW PELTONEN WORLD CUP RACING COLLECTION

Our World Cup level skis are the choice for race skiers and skiing enthusiasts who are looking for the absolute best. Manufacturing process uses our latest technologies and cutting edge materials to ensure the World Cup level quality.

Speed Edge 2.0 removes ski's traditional protruding sharp edge from the snow contact area of the ski and maximizes the usable gliding surface area of the ski.

**SPEED
EDGE 2.0**

Nomex is extra light, aviation grade Kevlar-reinforced honeycomb construction with top-class power transmission features. Due to the dynamic action of the construction it is used especially in race skis.

NOMEX
HONEYCOMB CAP CONSTRUCTION

OSC Curve is specialty feature for our all new Supra X skating ski. It is a combination of new optimized side cut working together lowered camber.

**OSC
CURVE**

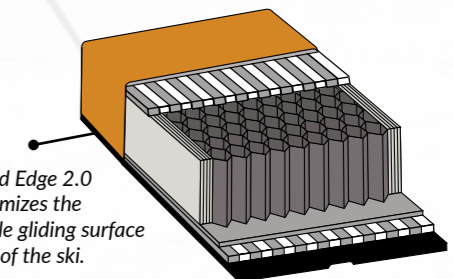

Peltonen's long term companionship with **Rottefella** continues and all our World Cup level skis are equipped with Rottefella NIS-plates.

ROTTEFELLA

NEW SPEED EDGE 2.0

After years of research and development and with a completely new production method of skis, we are re-introducing our Speed Edge concept with a new twist. With Speed Edge 2.0, the traditional cap construction, which has widely been our industry standard for almost 30 years, is history. Speed Edge 2.0 removes ski's traditional protruding sharp edge from the snow contact area of the ski and maximizes the usable gliding surface area of the ski. This assures maximum speed throughout glide phase, even when the ski is being run on its edge, cutting those valuable seconds needed on top level ski racing. Speed Edge 2.0 can be treated with liquid glide wax, which will result in perfectly sliding glidewall for your all new Supra X.

TECHNIQUE TIP: Your ski will always be the fastest when you let it glide on its running base as much as possible. Use our spirit, which we call "Zen and the art of gliding on one foot" to master your skating technique.

Speed Edge 2.0 maximizes the usable gliding surface area of the ski.

NEW OSC CURVE

Another Peltonen novelty is our new OSC Curve. This feature combines two features seamlessly working together in order to move you forward as fast as possible. OSC Curve is specialty feature for our all new Supra X skating ski. It is a combination of new optimized side cut working together with lowered camber. Lowered camber makes a smooth and gradual approach to ski's pressure area while also lowering the ski's center of gravity. This feature together with optimized new side cut gives you a feeling of full control on snow. OSC Curve brings handling and skiability to a whole new level.

NEW PELTONEN WCR SKATE SKI COLLECTION

After three years of research and development, Peltonen is bringing completely new skating ski with multiple new features. During development process, no stone has been left unturned to come up with most modern racing ski on the market.

WCR WEATHER PROFILES

WCR skis are available in different profiles for a full range of racing conditions. With various profiles we can offer you the best ski to all special conditions. Profile differences are created with structural (lamination) variations and base material variations.

UNIVERSAL

Universal is a ski design for most skiing conditions. There are variations within the profile.

HARDTRACK

Hardtrack is a special ski for hard track conditions. Also hardtrack comes with variations within the profile.

WSB

The legendary Peltonen wet snow base remains in collection and is as strong as ever. Must have for serious racers.

Supra X WSB and Infra X WSB comes with new kick-ass flaming base print.

SUPRA X UNIVERSAL / HARDTRACK

ALL NEW Supra X skate ski. Peltonen introduces it's Speed Edge 2.0 technology for the first time. Combined with completely renewed core and reshaped side cut brings Peltonen skating skis to a whole new level.

Speed Edge 2.0 technology reduces friction at contact points on snow. Side cut improves skiability and handling while redesigned tip and tail lowers the swing weight of the ski. Redesigned Nomex Honeycomb Core results in low camper yet stiff ski with a feeling. This ski also comes with a new Fluor Free Nano High Speed base complying with FIS rules.

This assures maximum speed throughout glide phase, even when the ski in being run on its edge, cutting those valuable seconds needed on top level ski racing.

NEW PELTONEN WCR CLASSIC SKI COLLECTION

Peltonen, known for its expertise in classic skis comes with completely new further improved collection which covers all needs for most demanding skiers even on World Cup level. Attention to details such as gliding and skiability will help you save those valuable seconds in racing.

INFRA X

Infra X is an uncompromised World Cup level classic ski. Nomex Honeycomb Core construction with higher profile gives more space for kick wax and less drag for better glide. In addition, the higher and more elastic wax pocket gives excellent, easier kick action without sacrificing glide. This ski comes with fluor-free Nano High Speed base material which improves glide in higher speeds.

BINDING	ROTTEFELLA BASIC

GRIP & GLIDE WITHOUT WAXING

G-Grip skis are ideal for slow-speed recreational skiing. Skis are based on Peltonen G-Grip™ coating, which provides grip and glide without need for waxing. G-Grip skis are easy to maintain, only wipe the base of your skis if dirty. The skis are in their element in conditions where grip waxing is normally difficult – like coarse spring snow or glazed tracks. The G-Grip™ coating is extremely durable and allows carefree skiing years to come.

USING A G-GRIP SKI FOR THE FIRST TIME

G-Grip skis are generally softer than regular classic skis. The grip is optimal right from the start. The ski optimizes its glide permanently after your first few kilometers of skiing. While skiing, the color changes from grey to black, which doesn't affect either the grip or the glide. On freshly fallen snow, especially when temperatures are close to zero, it's recommended to use an anti-ice product designed for G-Grip skis.

PELTONEN BACKCOUNTRY COLLECTION

When you want to find your own paths. Peltonen Backcountry skis are made for exploring and enjoying the nature, especially off the tracks. The light and narrowed tip on Metsä skis make it easy to lift them even in deep snow. Hunter skis come in handy when the terrains are challenging, and traditional backcountry skis get harder to handle. Complete both Metsä and Hunter skis with the Deep Snow poles, which are designed for deep snow and harder conditions.

RTECH / RTECH+

RTEch gloves are made from the best available materials offering great fitting and comfort. RTEch model is designed for racers and actively moving skiers. RTEch+ is the same glove with additional Thinsulate insulation to give some extra warmth in colder conditions.

SIZES | XS-XXL

WCR

Well-fitting racing gloves with extremely soft and durable leather on the palm side. The dorsal side is equipped with windproof fabric and a thin Thinsulate layer.

SIZES | XS-XXL

THERMO PLUS

Warmer version of WCR glove with pre curved fingers. Thicker Thinsulate layer and comfortable full lining are giving extra warmth also in bit colder conditions. This versatile glove is suitable for cross country and other winter activities.

SIZES | XS-XXL

KUUSAMO

Kuusamo is a great multi-sport glove. Outside seams and very elastic materials are giving exact and comfortable fit. Suitable for racers and active skiers - also for touring skiers in milder temperatures.

SIZES | XS-XXL

LAHTI

Traditional ski glove model with wind proof soft shell materials and light insulation. Suitable for all xc skiers.

SIZES | XS-XXL

NORDIC

A warm glove for colder weather or users with cold fingers. Suitable for touring skiing or other winter activities.

SIZES | XS-XXL

MARKA

Affordable multi-sport glove for skiing and free time around the year.

SIZES | XS-XXL

LOBSTER

Very warm three-finger glove for skiing and other winter activities.

SIZES | XS-XXL

MITTEN

Mitten with wind proof material for cold condition. Suitable for touring skiing and all winter activities.

SIZES | XS-XXL

SKI BAGS

You can carry your most reliable pairs in a sturdy ski bag. Three different sizes – all with a full-length, two-way opening zipper. The biggest one comes with wheels and a pull handle.

PRODUCT CODE	1-2 PAIRS	131635
	4-5 PAIRS	131636
	10 PAIRS	131634
